

WyreStorm® enado v5

Enado v5 is Here!

The best multi-platform browser-based AV control system just got better.

Version 5 of the award-winning WyreStorm Enado Control Solution has arrived, and with it comes a whole host of new features, updates, and improvements that elevates the control experience from both a programming and end-user perspective.

Get to know some of the great new features and major updates to the Enado interface that offers an even greater user experience.

Floor Plan Layout

Button Press Feedback

Decreased Loading Time

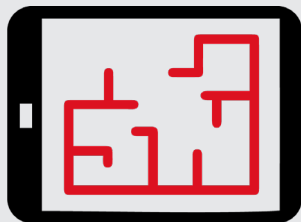

Timed Commands

NetworkHD™ Encoder Previews

Amazon Echo Integration

Floor Plan Layout

Perfectly align the design of the AV control with the design of the environment.

Improving on the already broad customization available in the Enado User Interface, Zone and Activity buttons now support arbitrary placement; catering to a blueprint or floorplan design approach for both commercial and residential environments.

Place Zone Selection buttons over the top of corresponding areas of a floor plan background image to create a smarter and faster way to navigate the user interface.

Inside a zone, place Activity buttons at display locations to enable incredibly intuitive end-user control of matrix switching audio and video.

Button Press Feedback

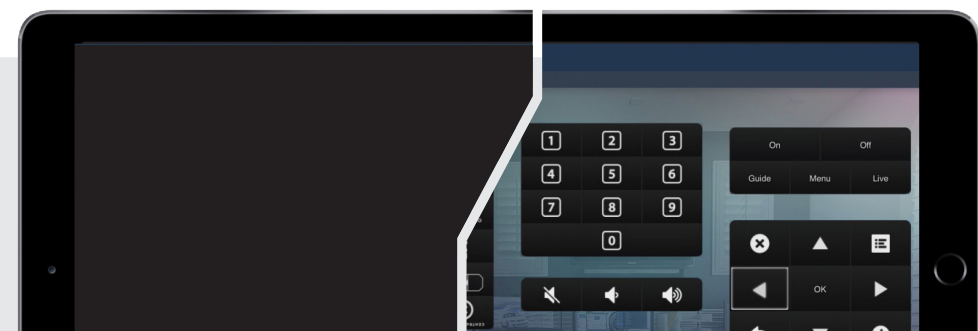

Sometimes the simplest changes make the biggest differences.

Visual aids now appear when pressing any control button in the Enado v5 user interface, doubling as confirmation the button has been pressed and a command has been properly issued by the system.

And to top it off, you can now press and hold control buttons to rapid fire commands, which is great for adjusting volume or navigating through menus for an even more complete end-user experience. Simple. Logical. Effective.

Loading Speed

Decreased Loading Time

Spend less time waiting and more time watching.

The importance of a quick and responsive control solution can't be overstated, especially during those high intensity sporting events, when a favorite show or an important meeting is due to start.

With a number of improved back-end developments, the Enado v5 control UI now loads 50% faster for user access in the blink of an eye so they don't miss a second of the action.

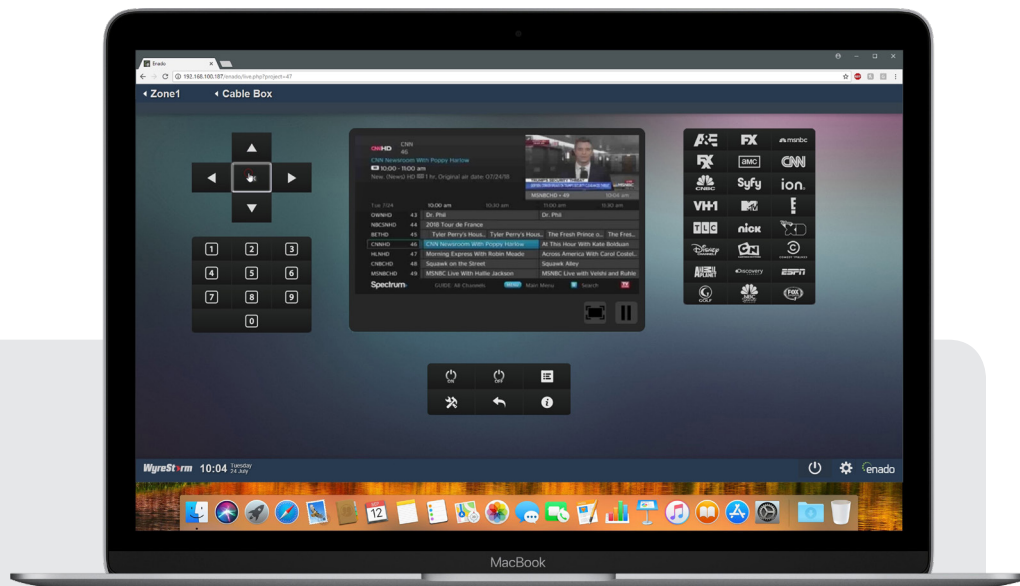

Timed Commands

Life is all about timing.

Refining existing Triggered Commands, Enado v5 now has the ability to send a single command or a fully loaded macro at a specified time. Timed events can be a single occurrence, or scheduled on a daily, weekly, monthly or annual basis for control of the devices you want whenever you want it.

For example, let Enado create hourly triggers to switch video feeds to a digital signage player. Or start your day the right way at 9am by automatically turning on the lights in the office and brewing a pot of coffee, turning on the TV and changing channel to the morning news, while playing your favorite songs in the background.

The possibilities are truly endless - and you don't have to lift a finger.

NetworkHD™ Encoder Previews

See what you're switching... before you switch it.

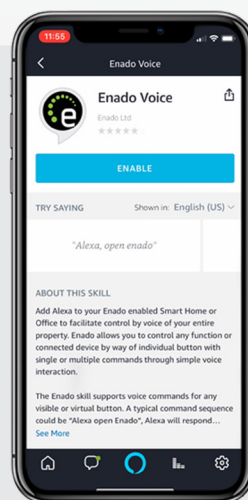

Just like the award-winning NetworkHD Touch™ iPad control app, Enado v5 now supports real-time video previews of all connected sources within the interface itself when used as part of NetworkHD™ 100, 200 and 400 Series AV over IP systems.

Enado v5 removes the need to look back and forth between a display and the interface by adding convenient video previews generated by NetworkHD Encoders to your source control activity. Give your neck a rest, see what you're switching, and let your finger do the work.

Amazon Echo (Alexa) Integration

Enado now has an Alexa Skill!!

Create an endless number of custom voice commands to create a cutting-edge smart environment. With the **MyEnado** subscription, eliminate the need to involve third-party APIs or awkward voice command phrases.

Alexa and Enado are the best way to control your entertainment devices and smart appliances.

Additional Updates & Features

- Enable/Disable Zone and Activity links
- Custom Zone terminology
- Improved Command Assignment tool
- WyreStorm product commands download with control protocol information
- Network scan tool
- Activity layouts can be linked to default icons
- Activity logs
- Direct link to tutorial videos
- Heightened remote access security
- MyEnado subscription
- Various bug fixes and stability improvements

Enado v5 is available now and automatically updates to existing and newly configured Enado systems, so you don't have to do a thing - just sit back and enjoy the v5 experience!

About Enado

Like an App, but not an App

With no downloads or constant updates for you to install, Enado does it automatically, offering effortless system management for the client and instant access for an end-user with no site visit or license fees to add control devices.

Control the Way You Want

Featuring extensive I/O to control devices through multiple IR, RS-232, IP, sensing inputs and relay outputs for instantaneous, Enado enables intuitive control from a smartphone, tablet, TV, PC or mac browser.

One-Touch Room Control

Simple QR code scanning allows users to connect their control device themselves as well as offering one-touch activation of in-room devices, such as lighting, blinds, projector and screen and other connected devices to get set up in seconds.
