

XT-4K-VIP-ACM

Xantech Premium Video over IP

API Document
REVA10 25/06/2019

Introduction

The VIP UHD video over IP platform allows distribution of HDMI video over a 1Gb Network switch. The XT-4K-VIP-ACM Control Module allows advanced third party control of the VIP system using TCP / IP, RS-232 and IR.

The XT-4K-VIP-ACM includes a web interface module for control and configuration of the VIP system and features 'drag and drop' source selection with video preview and independent routing of IR, RS-232, Audio and Video.

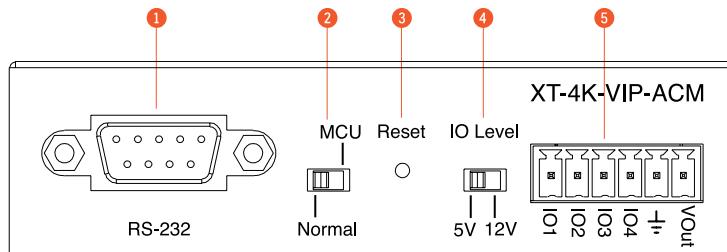

Pre-built Xantech product drivers simplify VIP product installation and negate the need for an understanding of complex network infrastructures.

FEATURES:

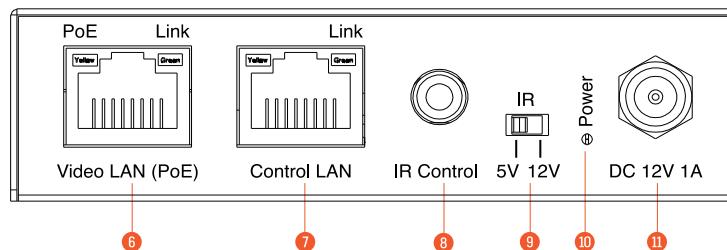

- Web interface module for configuration and control of the Xantech VIP system
- Intuitive 'drag & drop' source selection with video preview feature for active monitoring of system status
- Advanced signal management for independent routing of IR, RS-232, USB/KVM, audio and video
- Auto system configuration
- 2x RJ45 LAN connections to bridge existing network to VIP video distribution network, resulting in:
 - Better system performance as network traffic is separated
 - No advanced network setup required
 - Independent IP address per LAN connection
 - Allows simplified TCP / IP control of VIP system
- RS-232 integration for control of VIP system
- IR integration for control of VIP system
- PoE (Power over Ethernet) to power Xantech product from PoE switch
- Local 12V power supply (optional) should Ethernet switch not support PoE
- 3rd Party drivers available for major home control brands

Panel Descriptions - XT-4K-VIP-ACM

XT-4K-VIP-ACM - Front Panel

XT-4K-VIP-ACM - Rear Panel

- ① RS-232 control port – Connect to a third party control device for control of the VIP system using RS-232.
- ② MCU Upgrade toggle - for use when upgrading MCU firmware only.
- ③ Reset
- ④ Reserved for future use.
- ⑤ GPIO - Reserved for future use.
- ⑥ Video LAN (PoE) - Connect to the layer 3 network switch that the Xantech VIP components are connected to.
- ⑦ Control LAN port - Connect to existing network that your third party control system resides on. The Control LAN port is used for Telnet/IP control of the VIP system. Not PoE.
- ⑧ IR Ctrl (IR input) – 3.5mm stereo jack. Connect to third party control system if you are using IR as your method of controlling the VIP system.
- ⑨ IR - adjust IR voltage level between 5V or 12V input for IR Ctrl.
- ⑩ Power LED indicator
- ⑪ Power port – Use 12V 1A DC adaptor (sold separately) if not using a PoE network switch.

RS-232 Control

The Xantech XT-4K-VIP-ACM can be controlled via serial using the serial DB9 connector.

For the full list of command protocols please see 'RS-232 & Telnet Commands' located at the rear of this manual.

Baud Rate: 57600

Data Bit: 8-bit

Parity: None

Stop Bit: 1-bit

Flow Control: None

The Baudrate for the XT-4K-VIP-ACM can be adjusted using the XT-4K-VIP-ACM built-in web-GUI or by issuing the following commands:

RSB x : Set RS-232 Baud Rate to X bps

Where x = 0 : 115200
 1 : 57600
 2 : 38400
 3 : 19200
 4 : 9600

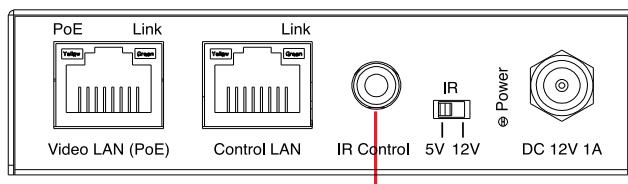

Infrared Control

The Xantech VIP system can be controlled using local InfraRed control from a third party control system.

Note: Only the source selection feature is available using local IR control. For advanced features such as video wall mode, audio embedding etc. you will need to use RS-232 or TCP/IP control.

Xantech have created 16x input & 16x output IR commands allowing source selection of up to 16x XT-4K-VIP-TX Transmitters on up to 16x XT-4K-VIP-RX Receivers. For systems larger than 16x source devices (XT-4K-VIP-TX) it is recommended to use RS-232 or TCP/IP control.

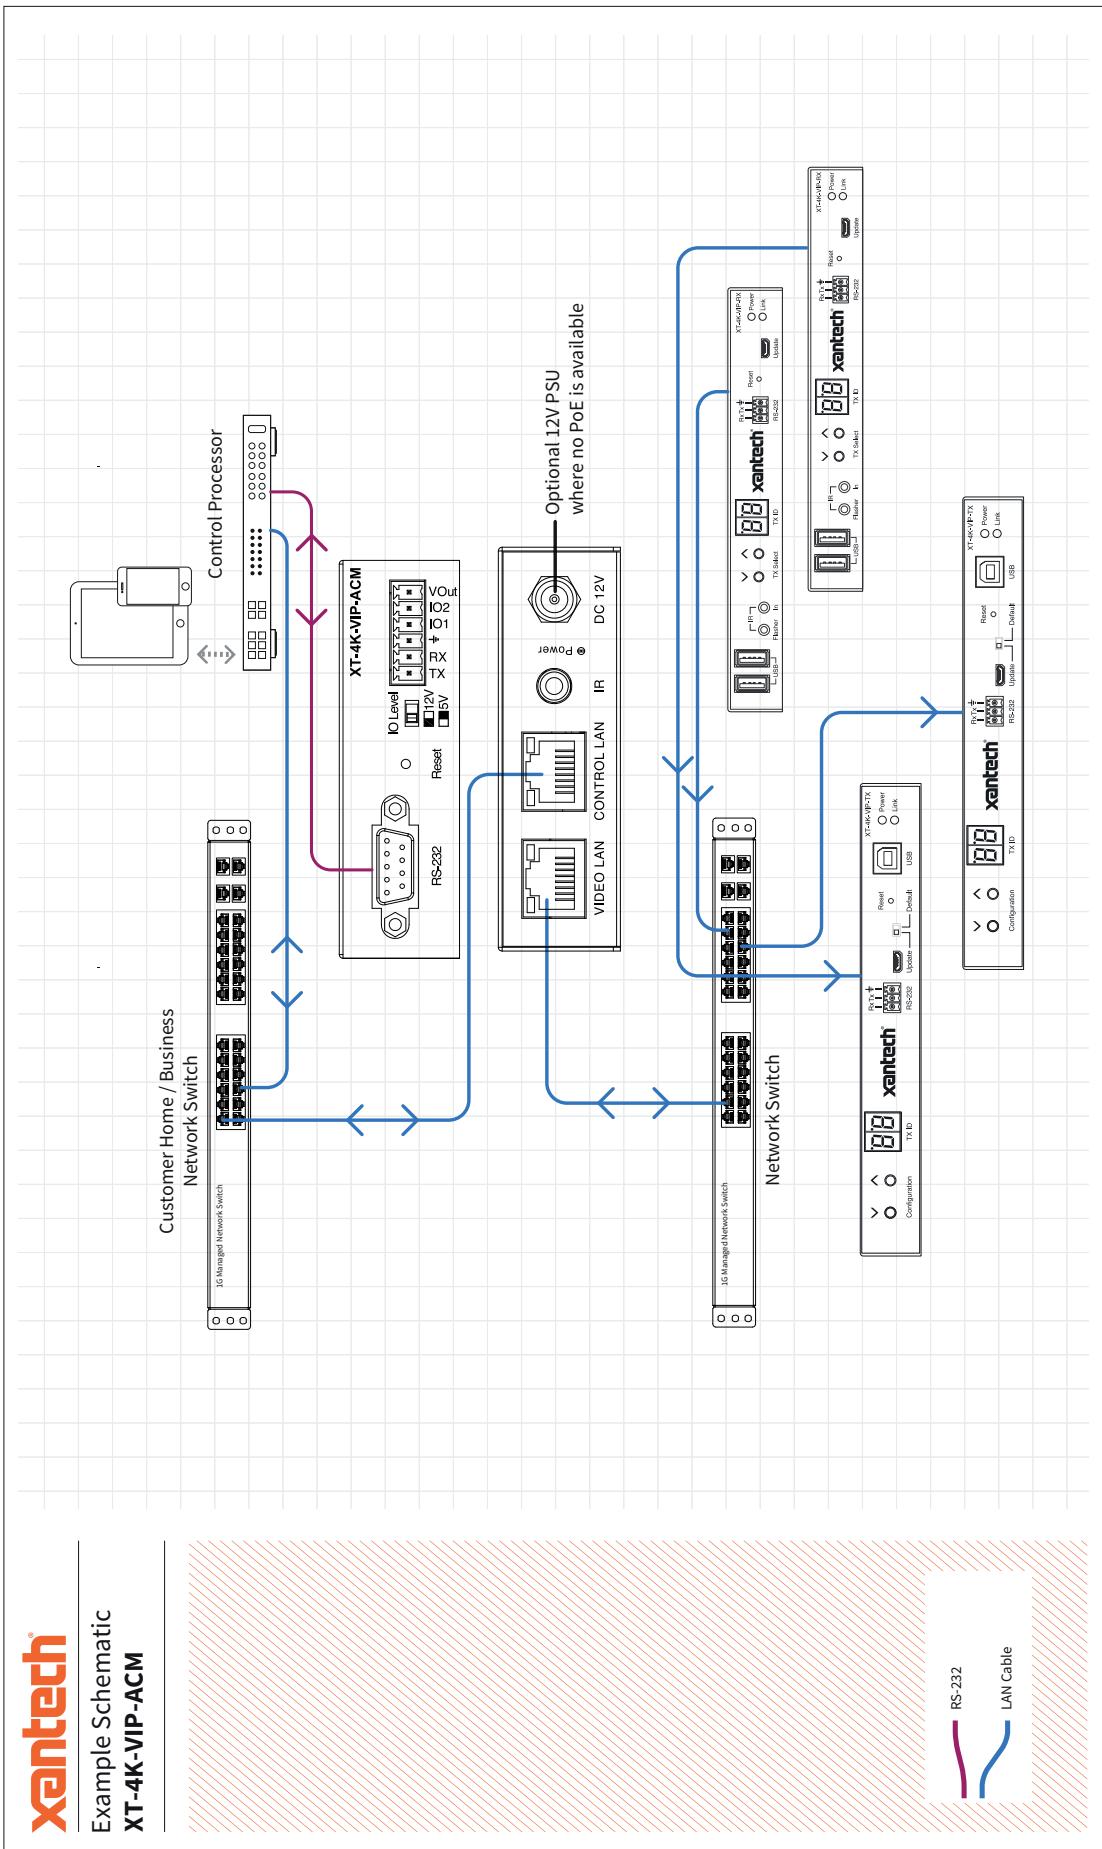

Third Party Control System

Application Diagram - RS-232 or TCP/IP Control

Example Schematic
XT-4K-VIP-ACM

RS-232 and Telnet Commands

The Xantech VIP system can be controlled via serial and TCP/IP. The following pages list all available serial commands for the VIP solution.

Common Mistakes

- Carriage return – Some programs do not require the carriage return whereas others will not work unless sent directly after the string. In the case of some Terminal software the token <CR> is used to execute a carriage return. Depending on the program you are using this token may be different. Some other examples that other control systems deploy include \r or 0D (in hex).
- Spaces – Xantech commands do not require spaces between commands unless specified. There may be some programs that require spacing in order to work.
 - How the string should look is as follows: OUT001FR002
 - How the string may look if spaces are required: OUT{Space}001{Space}FR002
- Baudrate or other serial protocol settings not correct - please see below for VIP settings

Xantech XT-4K-VIP-ACM commands and feedback

Pages 07-10 list the common API commands that will be required in a 3rd party control driver

For a full list of serial commands please see the 'HELP' feedback section at the rear of this document

Note: Max number of Transmitters (yyy) and Receivers (xxx) = 762 devices (001-762)

Receivers (outputs) = xxx

Transmitters (inputs) = yyy

Scaler output = rr

EDID input settings = zz

Baud rate = br

GPIO input/output ports = gg

Receiver (Output) Commands

COMMAND DESCRIPTION	COMMAND	RESPONSE
Set OUTPUT:xxx From INPUT:yyy (ALL signals routed)	OUT _{xxx} FR _{yyy}	Set output xxx From INPUT:yyy
Fix VIDEO OUTPUT:xxx From INPUT:yyy	OUT _{xxx} VFR _{yyy}	Set output video xxx From INPUT:yyy
Fix AUDIO OUTPUT:xxx From INPUT:yyy	OUT _{xxx} AFR _{yyy}	Set output audio xxx From INPUT:yyy
Fix IR OUTPUT:xxx From INPUT:yyy	OUT _{xxx} RFR _{yyy}	Set output IR xxx From INPUT:yyy
Fix RS232 OUTPUT:xxx From INPUT:yyy	OUT _{xxx} SFR _{yyy}	Set output RS232xxx From INPUT:yyy
Fix USB OUTPUT:xxx From INPUT:yyy	OUT _{xxx} UFR _{yyy}	Set output usb xxx From INPUT:yyy
Fix CEC OUTPUT:xxx From INPUT:yyy	OUT _{xxx} CFR _{yyy}	Set output cec xxx From INPUT:yyy
Set CEC OUTPUT:yyy ON or Off	OUT _{xxx} CEC _{ON/OFF}	Set output xxx cec mode ON/OFF
Set OUTPUT:xxx Fast Switching On or Off	OUT _{xxx} FAST _{ON/OFF}	Set output xxx fast switching mode ON/OFF
Set OUTPUT:xxx HDR On or Off	OUT _{xxx} HDR _{ON/OFF}	Set output xxx hdr mode ON/OFF
Reboot Receiver	OUT _{xxx} RB	Set output xxx reboot and apply all the new config
Rotate Receiver Video Output tt=0: clockwise 0 degree rotate tt=90: clockwise 90 degree rotate tt=180: clockwise 180 degree rotate tt=270: clockwise 270 degree rotate	OUT _{xxx} ROTATE _{tt}	output xxx rotate tt degree
Stretch video Output (keep aspect ratio stretch to fit)	OUT _{xxx} STRETCH _{ON/OFF}	Set output xxx stretch ON/OFF
Switch Receiver (Output) between Matrix and Video Wall mode	OUT _{xxx} MODE _{MX/VW}	Set output xxx to matrix/video wall mode
Receiver HDCP management mode	OUT _{xxx} DBG _{ON/OFF}	Set output xxx debug mode ON/OFF
Set Scaler Output Resolution 0:Bypass 1:2160p@30 2:2160p@24 3:1080p@50 4:1080p@60 5:1080i@50 6:1080i@60 7:720p@60 8:720p@50 9:1280x1024@60 10:1024x768@60 11:1360x768@60 12:1440x900@60 13:1680x1050@60	OUT _{xxx} RES _{rr}	Set output xxx resolution to bypass (=0) Set output xxx resolution to 2160p@30(=1) ETC
Single Receiver (output) status	OUT _{xxx} STATUS	(See status example at end of document)

Transmitter (Input) Commands

COMMAND DESCRIPTION	COMMAND	RESPONSE
Set CEC INPUT:yyy ON or Off	INyyyCECON/OFF	Set input xxx cec mode ON/OFF
Set TX Audio source to HDMI audio	INyyyAUDORG	Set Audio source:xxx to audio select hdmi
Set TX Audio source to Analog	INyyyAUDANA	Set Audio source:xxx audio select analog
Set TX Audio source to Auto	INyyyAUDAUTO	Set Audio source:xxx audio select auto
Reboot Transmitter	INyyyRB	Set output xxx reboot and apply all the new config
Copy EDID Input yyy from Output xxx	EDIDyyyCPxxx	Copy outputxxx edid to input yyy
Set Input: yyy EDID To EDID:zz zz=00: HDMI 1080p@60Hz, Audio 2CH PCM zz=01: HDMI 1080p@60Hz, Audio 5.1CH PCM/DTS/ DOLBY zz=02: HDMI 1080p@60Hz, Audio 7.1CH PCM/DTS/ DOLBY/HD zz=03: HDMI 1080i@60Hz, Audio 2CH PCM zz=04: HDMI 1080i@60Hz, Audio 5.1CH PCM/DTS/ DOLBY zz=05: HDMI 1080i@60Hz, Audio 7.1CH PCM/DTS/ DOLBY/HD zz=06: HDMI 1080p@60Hz/3D, Audio 2CH PCM zz=07: HDMI 1080p@60Hz/3D, Audio 5.1CH PCM/DTS/ DOLBY zz=08: HDMI 1080p@60Hz/3D, Audio 7.1CH PCM/DTS/ DOLBY/HD zz=09: HDMI 4K@30Hz 4:4:4, Audio 2CH PCM zz=10: HDMI 4K@30Hz 4:4:4, Audio 5.1CH DTS/DOLBY zz=11: HDMI 4K@30Hz 4:4:4, Audio 7.1CH DTS/DOLBY/ HD zz=12: DVI 1280x1024@60Hz, Audio None zz=13: DVI 1920x1080@60Hz, Audio None zz=14: DVI 1920x1200@60Hz, Audio None zz=15: HDMI 4K@30Hz 4:4:4, Audio 7.1CH(Default) zz=16: HDMI 4K@60Hz 4:2:0, Audio 2CH PCM zz=17: HDMI 4K@60Hz 4:2:0, Audio 5.1CH DTS/DOLBY zz=18: HDMI 4K@60Hz 4:2:0, Audio 7.1CH DTS/DOLBY/ HD	EDIDyyyDFzz	Set input yyy edid with default edid zz
Single Transmitter (input) status	INyyySTATUS	(See status example at end of document)

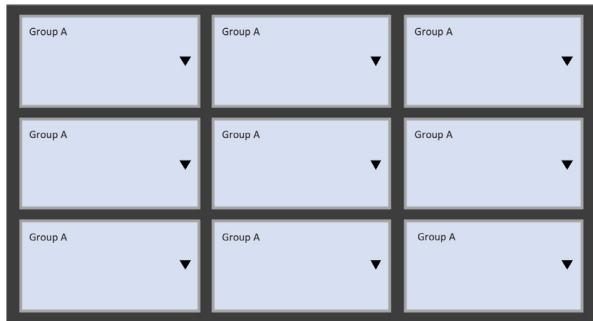

Video Wall Commands

Video wall configurations will be setup in the XT-4K-VIP-ACM Web GUI

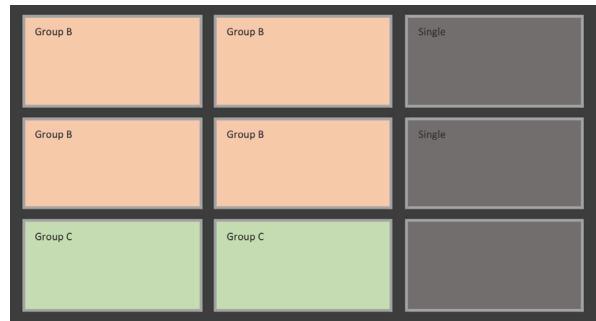

Each video wall setup will include the following:-

- Video wall creation = Each VIP system can include up to 9x separate video walls (01-09)
- Configuration = Individual configurations of screens within a video wall. An example of a configuration would be all screens assigned as a single video wall, all screens configured as individual displays, multiple video walls configured within a larger video wall (video wall groups – see below) (01-09)
- Groups = A video wall group is the ‘Grouping’ of VIP receivers within a video wall allowing simplified source selection and configuration recall of more than one VIP Receiver at the same time (A-J)

Video Wall 1 Configuration 1

Video Wall 2 Configuration 2

Example of control commands

VW01C01APPLY (will apply video wall configuration 1 above to all Receivers)

VW01C02APPLY (will apply video wall configuration 2 above to all Receivers)

VW01C01GaFR002 (will apply video configuration 1 and switch all screens to Transmitter 002)

VW01C02GbFR006 (will apply video configuration 1 and switch group b screens [orange] to Transmitter 006)

When recalling video wall configurations the following applies:

Characters:

idx = [01...09] - Video Wall Index / Number

cidx = [01...09] - Config Index / Number

COMMAND DESCRIPTION	COMMAND	RESPONSE
Apply Config to Video Wall	VW idx C cidx APPLY	Apply config: Configuration cidx
Set Grouped Output from single Source INPUT:yyy	VW idx C cidx G gidx FR yyy	[SUCCESS] Done
Apply Single Screen Config to Video Wall HxV Location	VW idx C cidx S HhhVvv	[SUCCESS] Done
Set Single Screen HxV Output from single Source INPUT:yyy	VW idx C cidx S HhhVvv FR yyy	[SUCCESS] Done
ALL video wall status	VWSTATUS	(See status example at end of document)
Single Video Wall status	VWidxSTATUS	(See status example at end of document)

For full Video wall API commands including VW setup please see 'HELP COMMANDS' on page 17 of this manual.

Exporting Video Preview

The Xantech XT-4K-VIP-ACM shows previews of the Transmitter and Receiver signals being distributed allowing you to view what source is selected and that the sources are active. The preview feature takes an image every few seconds. The image can be exported via the XT-4K-VIP-ACM Control port which gives the ability to show video status on third party control products.

The image export feature requires the 3rd party control system to poll the Xantech 'mxsta_Ver1.09.json' file (for a sample of this please contact Xantech technical support). The control system will poll this information using the following link (the below link is based on default control port IP address of 192.168.0.225):

<http://192.168.0.225/cgi-bin/getjson.cgi?json=mxsta>

The json file states which Transmitter and Receiver devices have a signal and their IP address. From this information we can then generate a poll to get the TX/RX image. The image return file is 'cap.bmp'

For example to get the source preview from a transmitter device:

```
"in": [{

    "id": 3,
    "name": "Transmitter 003",
    "ol": 1,
    "ver": "A1.4.9",
    "ip": "169.254.3.3",           //this transmitter IP
    "gw": "169.254.3.1",
    "sm": "255.255.0.0",
    "mac": "00:19:FA:00:59:4C",
    "em": 0,
    "ei": 15,
    "aud": 1,
    "sig": 1,                    // 1: means have signal, 0 :means no signal
    "conn": "HDMI:1",
    "discec": 0,
    "led": 3,
    "sgen": 0,
    "sgbr": 9,
    "sgbs": 3,
    "sgpa": 0,
    "sgsb": 0
}],
```

The polling request is: <http://192.168.0.225/cgi-bin/capture.cgi?hostip=169.254.3.3&capwidth=240?time=1547084198222>

"time=" is a random value because the browser will return the catch file if the link is the same.

Please note: recalling of the video preview is demanding on the Xantech hardware and may affect system performance. It is recommended that polling is completed every 5 seconds and that each TX/RX device is not polled at the same time.

General ACM200 Commands

COMMAND DESCRIPTION	COMMAND	RESPONSE
Print all available commands of XT-4K-VIP-ACM	HELP	(See HELP summary at end)
Turn IR control port On or Off	IRON/OFF	Set IR ON/OFF
Turn On Serial Guest Mode to Receiver (output) (NOTE: This only puts the RX into Serial Guest mode but doesn't open the connection. Please use command below) br =0: 300 br=1: 600 br=2:1200 br=3: 2400 br=4: 4800 br=5: 9600 br=6: 19200 br=7: 38400 br=8: 57600 br=9: 115200 bit= Data Bits + Parity + Stop Bits Example: 8n1 Data Bits=[5...8], Parity=[n o e], Stop Bits=[1..2]	OUTxxxSGON/OFF[br][bit]	Set serial guest mode config done
Serial Guest Mode to Transmitter (input) (details as above)	INxxxSGON/OFF[br][bit]	Set serial guest mode config done
Start Serial Guest Mode To Output ooo	OUT ooo GUEST	(no feedback when in guest mode)
Start Serial Guest Mode To Input ooo	IN ooo GUEST	(no feedback when in guest mode)
Close Serial Guest Mode	CLOSEACMGUEST	[Success] Exit guest
Set IO ports for use as input or output port gg=0: select all ports gg=01...04: select single IO port	GPIOggDIRIN/OUT	Set GPIO gg as input/output port
Set IO port to low(0) or high(1) level	GPIOggSET0/1	
Get IO port real input level	GPIOggGET	Get GPIO gg real input level 0/1
IO port status	GPIOggSTATUS	(See status example at end of document)
System status summary	STATUS	(See status example at end of document)

zz=16: HDMI 4K@60Hz 4:2:0, Audio 2CH PCM
zz=17: HDMI 4K@60Hz 4:2:0, Audio 5.1CH DTS/DOLBY
zz=18: HDMI 4K@60Hz 4:2:0, Audio 7.1CH DTS/DOLBY/HD

CLOSEACMGUEST : Close Input Or Output Guest Mode

===== Video Wall Control Commands

VW idx CREATE ccXrr [name] : Create Video Wall idx Of size Column cc X Row rr

VW idx NAME name : Set Video Wall idx Name To name

VW idx DEL: Delete Video Wall idx

VW idx OUT ooo HhhVvv : Video Wall idx Assign Receiver ooo To Position Horizontal hh
And Vertical vv

VW idx C cidx CREATE [name] : Create Video Wall idx Config cidx

VW idx C cidx NAME name : Set Video Wall idx Config cidx Name To name

VW idx C cidx APPLY : Apply Video Wall idx Config cidx

VW idx C cidx DEL : Delete Video Wall idx Config cidx

VW idx C cidx G gidx HhhVvv : Set Video Wall idx Config cidx Position hh,vv To Group gidx

VW idx C cidx G gidx FR iii : Set Video Wall idx Config cidx Group gidx From Input iii

VW idx C cidx S HhhVvv : Set Video Wall idx Config cidx Position hh,vv To Single Mode

VW idx C cidx S HhhVvv FR iii : Set Video Wall idx Config cidx Group gidx From Input iii

VW idx HhhVvv OWaa VWww : Set Video Wall idx Position hh,vv Outer Width aa And View Width ww

VW idx HhhVvv OHaa VHww : Set Video Wall idx Position hh,vv Outer Height aa And View Height ww

aa=[100...1000]: Screen Outer Width/Height

ww=[100...1000]: Screen View Width/Height

Help Commands

VW [idx] STATUS : Print Video Wall Status
 idx=[01...09]: Select Video Wall Index
 cidx=[01...09]: Select Config Index
 gidx=[A...J]: Select Group Index
 cc=[01...09]: Number Of Columns In Video Wall
 rr=[01...09]: Number Of Rows In Video Wall
 hh=[01...09]: Horizontal Position In Video Wall
 vv=[01...09]: Vertical Position In Video Wall
 ooo=000: Remove Receiver From hhvv Position
 ooo=[001...n]: Select One Output Port
 iii=[001...n]: Select One Input Port
 name: Max 16 Characters
 aa=[100...1000]: Screen Outer Width/Height
 ww=[100...1000]: Screen View Width/Height

===== Project Control Commands

SCAN : Scan Network For All Input And Output Devices
SCAN STATUS : Print Scan Results
SCAN RESET : Reset Scan Results
SCAN OSD ON/OFF : Show Scan Index On All Receiver Displays
ASSIGN RESET : Reset All Input/Output/Videowall/Scan Configurations
ASSIGN DF IN iii : Assign Device At Default IP To Input iii
ASSIGN DF IN iii REPLACE : Assign Device At Default IP To Replace Input iii
ASSIGN INDEX ddd IN iii : Assign New Device At Index ddd To Input iii
ASSIGN INDEX ddd IN iii REPLACE : Assign New Device At Index ddd To Replace Input iii
ASSIGN DF OUT ooo : Assign Device At Default IP To Output ooo
ASSIGN DF OUT ooo REPLACE : Assign Device At Default IP To Replace Output ooo
ASSIGN INDEX ddd OUT ooo : Assign New Device At Index ddd To Output ooo
ASSIGN INDEX ddd OUT ooo REPLACE : Assign New Device At Index ddd To Replace Output ooo
ASSIGN AUTO : Auto Assign All New Scanned Devices To Current Project
 ddd=[01...n]: Scan List Index value
 iii=[001...n]: Select One Input Port
 ooo=[001...n]: Select One Output Port

===== General Purpose Input/Output Port Commands

GPIO gg DIR IN/OUT : Set IO Port gg As Input Or Output Port
GPIO gg SET 0/1 : Set IO Output gg To Low(0)/High(1) Level
GPIO gg GET : Get IO Port gg Real Input Level
GPIO [gg] STATUS : Print IO Port gg Status
 gg=00: Select All IO Ports
 gg=[01...04]: Select One IO Port

===== Network Control Commands

NET LAN2 DHCP ON/OFF : Set LAN2 (Control LAN) DHCP To On Or Off
NET aaaa IP xxx.xxx.xxx.xxx : Set IP Address To xxx.xxx.xxx.xxx
NET aaaa GW xxx.xxx.xxx.xxx : Set Gateway Address To xxx.xxx.xxx.xxx
NET aaaa SM xxx.xxx.xxx.xxx : Set Subnet Mask Address To xxx.xxx.xxx.xxx
 aaaa=LAN1: Set Video LAN(POE) Config
 aaaa=LAN2: Set Control LAN(Web GUI) Config
NET RB : Reboot Network And Apply New Config
 Call This Command After LAN Config Is Changed To Reboot Network
NET TN xxxx : Set Telnet Port To xxxx

The logo consists of the word "xantech" in a bold, orange, sans-serif font. The letter "x" is lowercase and has a horizontal bar extending from its top right towards the center of the letter "a". The letters "a", "n", "t", "e", and "c" are also lowercase, while "h" is uppercase and has a vertical bar extending downwards from its middle.
